DETAILED WORK HISTORY

Current:

02/02/2020- Present	Speciality: Emergency Medicine
Emergency Medicine Registrar	Hospital: Midlands Regional Hospital Portlaoise
<p>MRHP is a busy secondary hospital with 200 patients attendance daily with broad spectrum of medical and surgical emergencies from a wide catchment area. As an emergency medicine registrar my role is leading resuscitation of critically ill and trauma patients as well as treating regular ED attendances with common presentations like Chest pain, Abdominal pain, Shortness of breath, Intoxications and traumas. I also take role in weekly teaching sessions, orientations of new doctors to the department and teaching observers.</p>	

08/01/2019- 02/02/2020	Speciality: Emergency Medicine
Emergency Medicine Registrar	Hospital: University of Medical Science Haydarpasa Training and Research Hospital
<p>I was managing patients with life threatening conditions in the Emergency Department of a busy and central tertiary hospital in İstanbul with average estimated attendance of 200000 annually.</p> <p>I also dealt with critical medical and surgical emergencies and gave first line support before referring them to the concerned department. As a senior registrar I was dealing with emergencies like acute pulmonary edema, cardiogenic shock, acute coronary syndrome, acute severe bronchial asthma, acute exacerbation of COPD, poisoning, upper GIT bleed, acute confusional state, hypertensive emergency, stroke, status epilepticus, hyperkalaemia, diabetic coma's etc. Being a trauma centre ,we also manage cases as vehicle collisions,gunshots and assaults.</p> <p>I also took role in practical and theoretical training of junior ED doctors in our weekly case presentations and simulations.</p>	

08/01/2018- 07/01/2019	Speciality: Emergency Medicine
Emergency Medicine Registrar	Hospital: St. Vincent's University Hospital Dublin
<p>The Emergency Department of St. Vincent's University Hospital Dublin is the major trauma centre for South East Dublin, treats over 55000 emergency admissions per year and serves a population of 300000. I have diagnosed and managed acute and urgent illnesses and medical, surgical emergencies and injuries for adults and children over 14.</p> <p>As it is the primary referral centre of the region I have gained a lot of experience in treating patients with specific conditions as stroke and major trauma including administration of thrombolytics, reduction and stabilization of fractures and dislocations. I also had critical patients that I inserted chest tubes, performed intubations and placed central IV lines.</p> <p>St Vincent's ED provides excellent medical training. I have regularly and actively participated at the weekly teaching schedule and simulation schedule, I also attended the VTE Pocus course while I was there as I have experience and great interest in the use of bedside ultrasound in emergency. I am confident in performing efficient resuscitation, stabilization and comprehensive assessment in the resuscitation room .</p> <p>I have always been interested and enthusiastic about teaching .In every position I have held I have always tried to take an active role in teaching medical students, usually in the form of tutorials. I am always happy to discuss interesting cases and help students formulate a differential diagnosis and a comprehensive management plan. I am an active participant in NCHD teaching sessions and have presented in Grand Rounds, Department meetings and Audit days.</p>	

01/08/2017-08/01/2018	Speciality: Emergency Medicine
Emergency Medicine Registrar	Hospital: University of Medical Science Haydarpasa Training and Research Hospital
As detailed above-current workplace	

01/12/2016-31/07/2017	Speciality: Emergency Medicine
Emergency Medicine Registrar	Hospital: Diyarbakir State Hospital
<p>Diyarbakir State Hospital is a large tertiary hospital in Southeast Turkey offering medical services to both civilians and army staff. On top of the usual responsibilities of managing medical /surgical emergencies in the resuscitation room, referring patients for admission after resuscitation, stabilization, comprehensive assessment and initiation of treatment I also managed cases specific to armed conflicts as penetrating wounds and major trauma. I have also managed and treated what was classified as a CBRN case –several cases of hydrazine intoxication after an F-16 crash.</p>	

01/09/2012-30/11/2016	Speciality: Emergency Medicine
Emergency Medicine Registrar	Hospital: Fatih Sultan Mehmet Education and Research Hospital-Istanbul
<p>Fatih Sultan Mehmet is a large tertiary hospital in Istanbul known for being the stroke centre of the Asian side of Istanbul</p> <p>I have gained many skills both clinical and non-clinical .As well as striving to deliver protocol and guideline driven care to unstable patients, I also improved my leadership skills in leading a CPR, using mechanic ventilator, opening ultrasound guided peripheric and central IV lines.</p> <p>I have always been interested and enthusiastic about teaching. I was the doctor responsible for the making on-call rota and scheduling the weekly teachings and presentations as well as the participation to symposiums, congresses and courses for this clinic consisting of 40 SHOs and 10 registrars. I have also actively taught first aid courses on a monthly basis for non-medical employees of the hospital.</p> <p>I have a keen interest in imaging in the context of Emergency Medicine diagnosis and management. My speciality exam finishing thesis was a prospective study about the changes in inferior vena cava metrics before and after hemodialysis, a 60 patient study that all caval diameters and ratios were measured by USG.</p>	

01/09/2012-31/08/2014	Speciality: Emergency Medicine
Emergency Medicine SHO	Hospital: : Fatih Sultan Mehmet Education and Research Hospital-Istanbul
<p>My responsibilities included comprehensive clinical examinations and history taking, stabilisation and initiation of treatment with involvement of senior doctors in complex cases. It is indeed a challenge to work in the tertiary hospitals in Istanbul but the experience is second to none as one is exposed to a tremendous number of case presentations and deal with people of different cultural and economical backgrounds. Due to this fact I learned how to manage the busy flow of an Emergency Department and I had chance to improve my clinical and decision making skills as well as communication and managing patient's expectations. Under the supervision of my seniors I improved my dexterity in invasive and non-invasive procedures like peritoneal taps, ABGs, ET intubations, lumbar punctures, suturings, urinary catheterizations, obtaining ECG and bed-side USG etc. I have managed patients with acute chest and abdominal pain, headache, SOB; including ACS, CLD with complications, stroke, CRF with complications, CCF, COPD ,arrhythmias, acute severe asthma, epilepsy, DKA, HONKK, drug overdoses, substance abuses and poisonings.</p>	

01/11/2011-30/08/2012	Speciality: General Practice
Medical SHO	Hospital: Agri State Hospital

Agri is an area in the eastern border of Turkey, agriculture and stock raising being the main activities. Due to the fact that the population lives scattered in small villages in hard to reach high altitude areas, my duties involved both in hospital activities as well as home visits to bed bound patients. I was involved in managing both acute and chronic presentations. I have managed medical chronic conditions as chronic pain, arthritis, asthma, treatment of diabetes and its complications, hypertension but also conditions related to medicine of the elderly, complications and treatment of bed bound patients. I have performed wound debridements and minor suturing as well as blood sampling . I felt responsible for the health of the community and have enjoyed the job as I was also involved in the promotion of health by raising awareness about available medical services in the area, screenings and vaccines.

Clinical Skills	
Emergency	<ul style="list-style-type: none"> • ACLS • BLS • Poisoning and drug abuse management • Management of multiple and poli trauma • Endotracheal intubation • Chest tube insertion • Central venous line placement • Pericardiocentesis • Reduction and management of fractures and dislocations
Surgical	<ul style="list-style-type: none"> • History taking • Clinical Examinations • Suturing • Wound dressing • Preoperative and postoperative care • Incision/drainage of abscess
Medical	<ul style="list-style-type: none"> • History taking • Clinical examination • IV line placement • Blood sampling • ABG's sampling • Nasogastric intubation • Lumbar puncture • Urinary Catheterization • Ascitic tap
